

SAVE MI HEMLOCKS

HEMLOCK WOOLLY ADELGID (HWA)

What is HWA?

HWA is a forest pest that is deadly to Eastern hemlock trees. It can be spread by birds or on clothing. HWA is slow-moving and responds very well to treatment.

HWA has decimated hemlocks on the east coast and now it is here. We need your help to save the hemlocks in our state and in our region!

Identify.

Look for white, woolly masses attached to the tree at the base of the needle.

Report.

Your information is crucial. Reports will help us understand the scope of the infestation and what areas are most at-risk.

Take Action.

Join our collective. Our local task force is working to secure funding to lower the cost of treatment.
